

FontTwister

FontTwister makes it easy to create dazzling logos and text effects for web pages, multimedia projects, and presentations. With its nearly unlimited possibilities to manipulate text and its intuitive interface, FontTwister lets you create custom, professional-quality artwork in seconds.

FontTwister lets you select from among dozens of professionally-created logo styles, or start from scratch and design your own. You can even use FontTwister's text effect generator to create an unlimited selection of random, new, optimized text effects.

Whether you're designing a new company logo, creating navigation buttons for your web site, or spicing up a multimedia presentation, FontTwister lets you turn ordinary text into stunning works of art.

First-time users will enjoy the 10-minute guided tour by the FontTwister Text Effect Assistant. It demonstrates how easy it is to use FontTwister's nearly infinite range of design options.

Power users will want to use the program's advanced options, which give you unlimited control over glows, bevels, embossing, transparency, texture, edges, soft shadows, blurs, and dozens of other features. You can reedit text and effects at any time.

Tucows Rating: 
5Star-Shareware:

Pentium 90 MHz processor or higher
Hi-Color or True Color graphic
5 MB of available hard disk space

Categories: graphics, web graphics, DTP, fonts

Price: \$39

A 30-day trial version is available at <http://www.neuber.com>.

How to design a text effect with FontTwister

The **text** can be changed any time. The letters can be by chance put more highly and more deeply or tilted to the left and to the right. Make the text transparent to let the background show through.

Fill text and background with a color, a color gradient or a texture. You can use any graphic file as texture, which can be dye, turn, draw more softly or sharply. An imprint can be added to the text.

The text can be moved, stretch or compressed, rotated or sheared, **deformed** or twisted as much as you liked. Select available text shape or simply draw your desired text shape.

You have the letter **outlines** from loose threads, on-rough or weather. Fix manner and fineness of the effect by mouse click. You determine the effect intensity by adjusting the strength of the effects in x and y direction.

A single click lets you choose from among 16 styles of 3D **bevel**, or you can create a custom bevel style, choosing your bevel profile, height, depth, and lighting angle.

The text could be deposited with a **shadow** to stand out from the background or to float in to space. Select a shadow from predefined examples or change directly color, transparency, blur and position of the shadow.

You can create quite simply a 3D button, a fade effect or an impressive **frame** around the text. Change the frame thickness and color as well as the number for the corners of the stellate frame.
